

# Development of a Physical Activity Intervention for Navajo Cancer Survivors

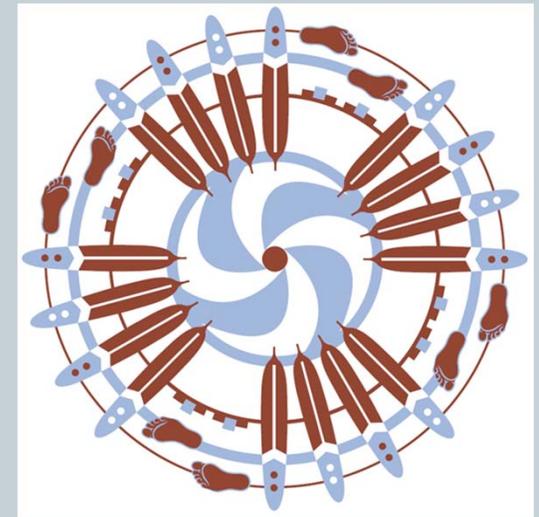

NORTHERN  
ARIZONA  
UNIVERSITY

FLAGSTAFF

Jennifer Bea, PhD  
Etta Yazzie, RN  
Dirk de Heer, PhD  
Anna Schwartz, PhD  
Taylor Lane, MA

A National Cancer Institute-designated Comprehensive Cancer Center

Funded by NCI: U54 CA143925-06; NNHRRB #: NNR14.192

# Overview

- **Background: Native Americans and Cancer**
- **Perceptions of cancer among Navajo cancer survivors**
- **Intervention Description & Progress Update**
- **Future Directions**

# American Indians (AI) and Cancer

- **↓ cancer mortality for White populations, ↑ for AI/AN men and women, 2001 to 2009** (CDC, 2016)
- **AI/AN lowest 5-year survival rates of any group (59.0%) and only group w/o reductions in cancer mortality from 2001 to 2010** (Siegel, Ma, Zou, & Jemal, 2014).
- **Most common cancers among AI/AN:**
  - Lung, female breast, colorectal and prostate cancer
  - Death rates for some more common among Native populations (gallbladder, stomach, liver, and kidney cancers) (White et al., 2014).

# Cancer is 2<sup>nd</sup> leading cause of death among Navajo Overall

Table 2: 15 Leading Causes of Death, Both Genders

Rank	Cause of Death	Count	Rate per 100,000	Percent of all deaths <sup>3</sup>
1	Unintentional Injuries	752	107.73	18.9
2	Cancer	506	72.49	12.7
3	Heart Disease <sup>4</sup>	485	69.48	12.2
4	Diabetes	228	32.66	5.7
5	Chronic Liver Disease & Cirrhosis	224	32.09	5.6
6	Influenza & Pneumonia	181	25.93	4.6
7	Suicide	119	17.05	3.0
8	Stroke	107	15.33	2.7
9	Septicemia	90	12.89	2.3
10	Dementia	84	12.03	2.1
11	Assault	83	11.89	2.1
12	Alcohol Dependence Syndrome	81	11.60	2.0
13	Renal Failure	77	11.03	1.9
14	Hypertensive Disease	59	8.45	1.5
15	Chronic Obstructive Pulmonary Disease (COPD)	49	7.02	1.2

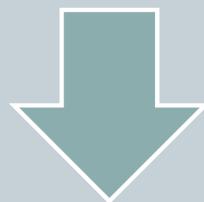

Crude all-cause mortality rate is 32% higher for males than females. Unintentional Injuries account for nearly 1 in every 5 Navajo deaths. There are nearly 33% more Unintentional Injury deaths than Cancer deaths and 35.5% more than Heart Disease deaths; Foley et al. Navajo Nation Mortality Report, 2006-2009. Navajo Epidemiology Center. 2016.

# Project Overview: Two-phased Pilot Study

- **Phase I (year 1-2): Qualitative Study:**

**AIM 1:** Assess current **physical activity habits, barriers, and preferences** among Navajo cancer survivors using a combination of focus groups and individual interviews

- **Phase II (years 2-3): Pilot Physical Activity Intervention**

**AIM 2:** Evaluate the feasibility and effectiveness of a culturally and clinically sensitive physical activity intervention among Navajo cancer survivors

# Recruitment

- 5 focus groups (N=4 Rural Chapter, 1 Flagstaff)
- 13 individual interviews (N=11 Flagstaff)
- 32 Navajo cancer survivors
- 8 relatives/ spouses/ close friends
- Adults
- Males and females
- Any prior cancer

# Focus group/Interview Flow

- Focus groups included Navajo-speaking oncology nurse
- Began with Navajo introductions
- Study explanation and Q/A
- Consent
- Discussion guide questions
- Gratitude and Closing

## Characteristics of Navajo cancer survivors participating in focus groups and interviews (N=32)

<b>Characteristic</b>	<b>Mean or N</b>	<b>SD or %</b>
<b>Age, years</b>	<b>56.9</b>	<b>12.3</b>
<b>Sex</b>		
<b>Male</b>	<b>13</b>	<b>41%</b>
<b>Female</b>	<b>19</b>	<b>59%</b>
<b>Primary Language</b>		
<b>English</b>	<b>30</b>	<b>94%</b>
<b>Navajo</b>	<b>2</b>	<b>6%</b>
<b>Cancer Site</b>		
<b>Breast</b>	<b>10</b>	<b>31%</b>
<b>Colon</b>	<b>10</b>	<b>31%</b>
<b>Gynecologic, excl. breast<sup>a</sup></b>	<b>3</b>	<b>9%</b>
<b>Gastrointestinal, excl. colon<sup>b</sup></b>	<b>5</b>	<b>16%</b>
<b>Other<sup>c</sup></b>	<b>4</b>	<b>13%</b>
<b>Time since diagnosis, years<sup>d</sup></b>	<b>4.7</b>	<b>4.7</b>

<sup>a</sup>Gynecologic, excluding breast cancer, represents ovarian and cervical cancers; <sup>b</sup>gastrointestinal, excluding colon, represents esophageal, gall bladder, and stomach; <sup>c</sup>prostate, kidney, hematologic cancers; <sup>d</sup>based on year of diagnosis by self-report, not exact date. Missing data: Age=2; Time since diagnosis=7.

## Project Overview: Two-phased Pilot Study (3 years)

- Phase I (year 1): Qualitative Study:

**AIM 1:** Assess current **physical activity habits, barriers, and preferences** among Navajo cancer survivors using a combination of focus groups and individual interviews

- Phase II (years 2-3): Pilot Physical Activity Intervention

**AIM 2:** Evaluate the feasibility and effectiveness of a culturally and clinically sensitive physical activity intervention among Navajo cancer survivors

# Physical Activity (PA) and Cancer

- Up to 30-60% reduction cancer recurrence and mortality <sup>2,3,4</sup>
- Improved fatigue, quality of life, body composition, body image, & physical function among survivors <sup>5</sup>
- How much physical activity to reduce risk for colorectal and breast cancer?
  - Activity at moderate intensity (>4.5 MET)
  - Approx. 3-4 hours per week <sup>6</sup>
- None of these physical activity interventions among Native American Cancer Survivors

<sup>1</sup> Moore JAMA Int Med 2016; <sup>2</sup>Irwin Cancer Prev Res 2011; <sup>3</sup>Irwin J Clin Oncol 2008; <sup>4</sup> Meyerhardt J Clin Oncol 2006; <sup>5</sup> Schmitz Med Sci Sports Exerc 2010; <sup>6</sup>Wolin et al., 2009

# Components of Physical Activity

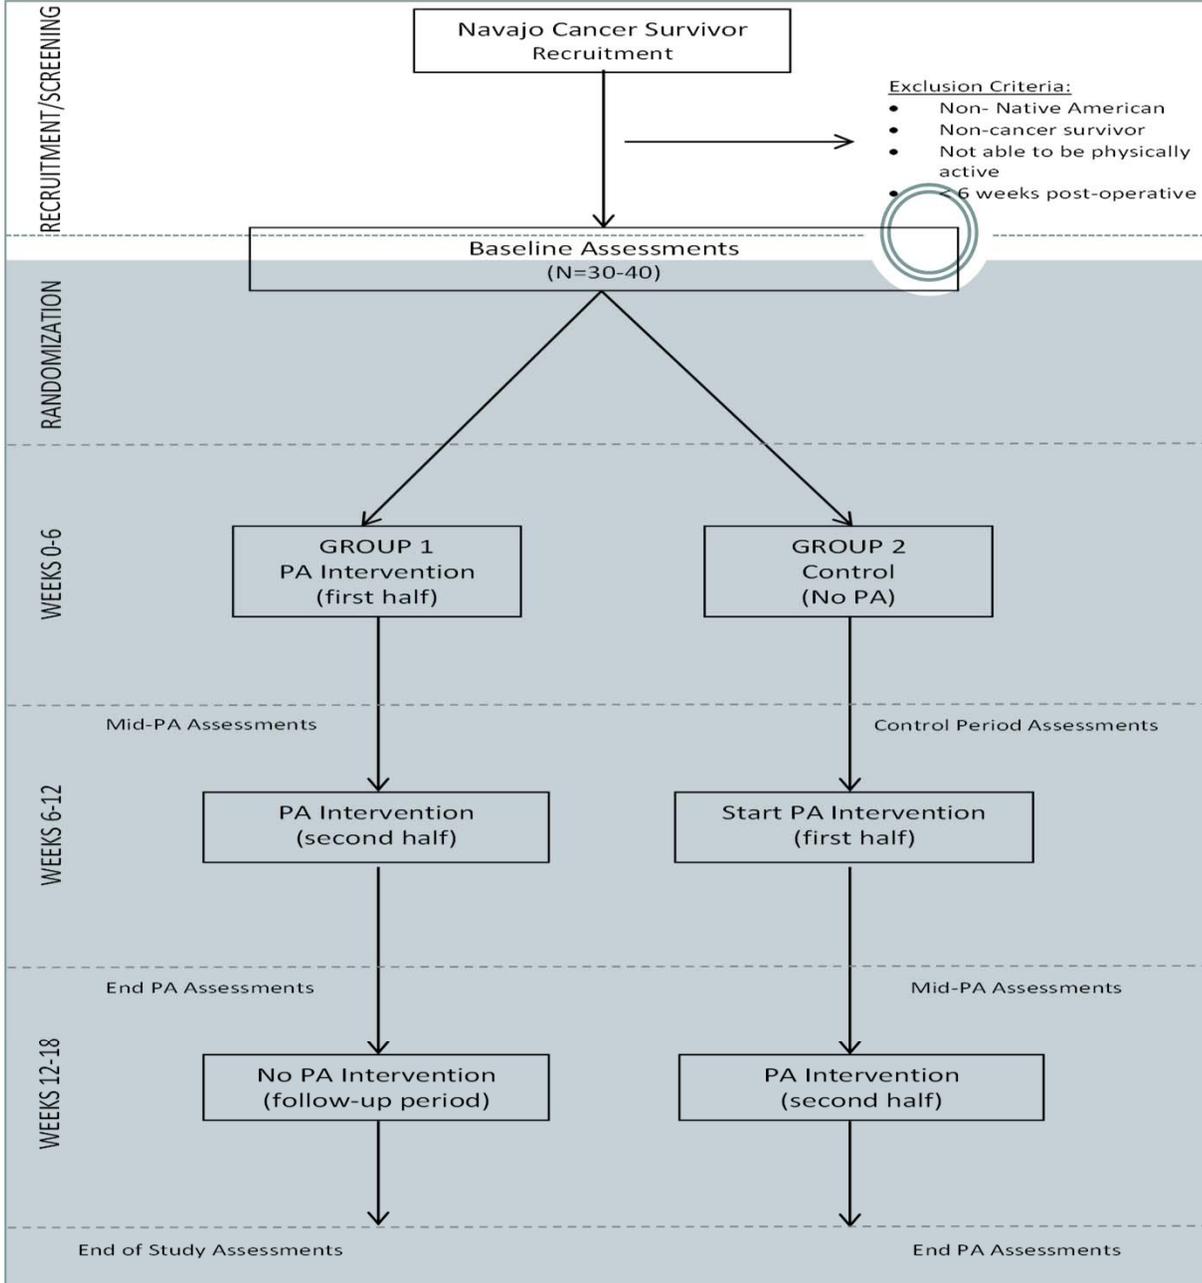

(US PA Guidelines and ACSM Cancer Survivor Guidelines)

- **Aerobic/Endurance Training**
  - 150min Moderate OR 75 min Vigorous per week
  - OR...An equivalent mix of the two
- **Strengthening**
  - 2 days per week (non-consecutive days per muscle)
  - major muscle groups
  - 2 sets, 8-15 reps (depending on age and health)
- **Stretching**
  - 3-5 times on days that other exercises are performed
  - 10 to 30 seconds each
- **Balance Training**
  - 2 sets 8-15 reps for strengthening styles
  - Pure balance—increase time as you progress (i.e. 1 foot stand)

# Design Phase II

## Restoring Balance

- Culturally relevant incentives for participation.
- Appropriate exercise for the community setting and participants
- focus on walking and resistance exercise, can be performed without equipment
- Community and peer support
- Cancer-related educational materials.

**Figure 1.** Physical Activity among Navajo Cancer Survivors Study Design

Repeat assessments include the following: Surveys: demographic/medical survey (baseline only), quality of life, physical activity, program satisfaction (end of PA intervention only); Measurements: aerobic capacity, functional mobility, anthropometry, physical activity (wearable device), metabolic markers

# Restoring Balance Program

RESTORING BALANCE

## HOME EXERCISE PROGRAM INSTRUCTIONS

Each week you will do the Day 1 of the exercise program with your trainer. The other days of the week, do your best to follow the exercise program handouts. Your trainer will go over each weeks' exercises with you and will show you the resistance exercises to do to build your muscles. If you do aerobic and resistance exercise on the same day, you should do your resistance exercises after you complete your aerobic exercise.

It is important to follow the program. If you don't do the exercises it will be very hard to keep up with your exercise group. If you want to additional exercise, you can, but keep the activity easy and fun. If you push yourself too hard, you will not get all the benefits of this program.

The aerobic exercise can be walking, jogging, running, or bicycling. On days when you are supposed to be active for 30 - 60 minutes you can do other activities like herding sheep, or playing basketball. Just be sure you keep moving! If you find that you cannot complete the full exercise session or intervals, start off at an easier pace the next time. It takes some practice to learn to pace yourself. You'll figure it out soon!

Take a friend or family member with you and make your aerobic exercise more fun. If they don't want to do the intervals, then you go ahead and do them and come back and rejoin your friend. Pretty soon they'll be joining you! People who exercise together have more fun, and build bonds that last.

**Congratulations!**

You are taking the steps to change your life and your health!! Remember, we are here to help you and support you. Call your trainer or the study team if you have any questions.

**Contact us if you have questions!**

## EXERCISE WEEK 1: GETTING STARTED

*\*Day 1 Aerobic and Strength Exercise will be performed with your trainer*

**AEROBIC (3x THIS WEEK)**

**I DID IT!**

Day 1*	10 minute warm-up, 1 x 4 minute interval, 5 minutes cool down.	<input type="checkbox"/>
Day 2	20-30 minute walk, jog or bike ride at steady comfortable pace.	<input type="checkbox"/>
Day 3	10 minute warm-up, 2 x 3 minutes interval w 3 minutes easy walking in-between and 5 minutes cool down.	<input type="checkbox"/>

*You don't have to do aerobic exercise 3 days in a row.*

*If you find that you cannot complete the full exercise session or intervals, start off at an easier pace the next time. It takes some practice to learn to pace yourself. You'll figure it out soon!*

**STRENGTH (2 SETS EACH, 2x THIS WEEK)**

**I DID IT!**

*Do not do strength exercises 2 days in a row to give your muscles a rest.*

	DAY 1		DAY 2	
	Set 1	Set 2	Set 1	Set 2
Calf raises: 15 reps; use counter support if needed	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Theraband pull-aparts or seated back flies: 15 reps	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Single leg balance: 30 seconds each leg	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Dead bug: 5 arm/leg extensions	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Calf Raises

Pull-aparts

Single leg balance

Dead bug

NOTES (including Progression / Regression):

# Preliminary Baseline Characteristics

- **N=13 Navajo cancer survivors have**
  - 5 breast,
  - 3 colon/gastric,
  - 2 uterine/ovarian,
  - 2 multiple myeloma,
  - 1 other cancer
- **Sex: 3M/10F**
- **Age: 55.5 years  $\pm$ 10.4**
- **BMI: 31.2kg/m<sup>2</sup> $\pm$ 4.3**
- **Body fat: 42.7% $\pm$ 10.5**
- **Waist Circumference: 99.3cm $\pm$ 29.1**
- **HbA1c: 6.8 $\pm$ 2.0**
- **6min walk: 0.21mi $\pm$ 0.1**
- **PROMIS QOL 3.0 $\pm$ 0.88**
- **PROMIS social isolation: 1.82 $\pm$ 0.81**

# Intervention Status

- Recruitment ongoing in Flagstaff and Leupp
- Working on further expansion
- Measurements ongoing
- Physical activity ongoing
- Final pilot measurements expected this Fall

# Intervention Support

- **Native Americans for Community Action**
  - Facilitated by outreach
  - Well positioned to facilitate intervention implementation
  - Dedicated and convenient exercise space
  - Trainers for supervision, goal setting, encouragement
  - Space for NAU/UA researchers to conduct measurements
- **Arizona Oncology Associates**
  - Recruitment
  - Space to screen and consent
- **NCI, NACP, NAU IRB (phase 1), UA IRB (phase 2 and full), Chapter House, Western Agency Council, NNHRRB, NACA board, NDOH,**
- **And Growing.....**

# Important Lessons for Tribal Research

- Design research that supports tribal goals
- Engage local partners in the research
- Ensure the research will benefit the community during the research process, not just afterwards
- Expand typical direct dissemination efforts
- Build community relationships
- Build community capacity
- Map out your timeline based on community meetings and approval processes

# Acknowledgements

# Screening Handout

## WHY IS SCREENING SO IMPORTANT? =

- EARLY DETECTION MEANS:**
- more treatment options
  - better chance of cancer removal before it spreads
- It could save your life!*

## GENERAL LIFESTYLE CHOICES

Cancer is not caused by one thing alone; Your chance of getting cancer is affected by mix of genetics and the environment. While you may not be able to entirely prevent cancer, there are some things you can control:

**Tobacco**

Avoid chewing or smoking tobacco, also avoid being around others that smoke

**Diet**

Eat a healthy diet with a mix of fruits, vegetables, whole grains and other non-processed foods

**Alcohol**

Have no more than 2 drinks a day for men, no more than 1 drink a day for women

**Obesity**

Maintain a healthy weight with a healthy diet and with exercise. For adults, do weekly activity of 150 minutes of moderate-intensity exercise or 75 minutes of vigorous-intensity exercise.

## CANCER SCREENING GUIDELINES

### RESTORING BALANCE

Funded by The National Cancer Institute (NIH) in partnership with: The Partnership for Native American Cancer Prevention, Northern Arizona University, University of Arizona Cancer Center

Screening for ovarian, prostate, and skin cancers has not been shown to reduce deaths.

## SCREENING FOR MEN

### AGE 20-39

**Colon Cancer:** Age 20, screening only for high risk individuals (due to family history, genetic disorder, or presence of irritable bowel disease), Colonoscopy, Flexible sigmoidoscopy, or Fecal occult blood test

### AGE 40-49

**Colon Cancer:** Same as age 20-39

**Prostate Cancer:** Age 40, screening only for high risk individuals (2+ family members who had prostate cancer before age 65)  
Age 45, screening only for higher risk individuals (1 family member with prostate cancer before 65, & African American men). Prostate Specific Antigen (PSA) test, Digital rectal exam

### AGE >50

**Colon Cancer:** Age 50, screening for all men. Colonoscopy, Flexible sigmoidoscopy, or Fecal occult blood test

**Prostate Cancer:** Age 50, screening for all men. >Age 65, screening only with doctor recommendation  
PSA test, Digital rectal exam

**Lung Cancer:** Age 55, screening for men with an active or former history of smoking (past 15 years). Low-dose CT scan

## SCREENING FOR WOMEN

### AGE 29

**Breast Cancer:** Regular self-clinical breast exam recommended for high risk individuals (genetic mutation, those having received radiation to the chest)

**Cervical Cancer:** At age 21, women should have a Pap smear every 3 years. HPV testing only if Pap is abnormal

**Colon Cancer:** At age 20, screening only for high risk individuals (due to family history, genetic disorder, or presence of irritable bowel disease), Colonoscopy, Flexible sigmoidoscopy, or Fecal occult blood test

### AGE 30-39

**Breast Cancer:** Same as <29 years old

**Cervical Cancer:** Pap smear every 5 years (unless abnormal Pap or non-cervical cancer related hysterectomy). Those not yet with cancer, but who have cells with potential to develop into cancer should monitor for 20 years and get a colposcopy

**Colon Cancer:** Same as <29 years old

### AGE 40-49

**Breast Cancer:** Ages 40-44, annual mammograms upon request. At age 45, women should get mammograms every year or every other year depending on doctor recommendation

**Cervical Cancer:** Same as age 30-39

## SCREENING FOR WOMEN

### AGE 40-49 cont.

**Colon Cancer:** Same as age 20-39

### AGE 50-64

**Breast Cancer:** Mammograms every year or every other year depending on doctor recommendation.

**Cervical Cancer:** Same as age 30-49

**Colon Cancer:** At age 50, screening for all women. Colonoscopy, Flexible sigmoidoscopy, or Fecal occult blood test

**Lung Cancer:** Age 55, screening for women with an active or former history of smoking (past 15 years). Low-dose CT scan

### AGE >65

**Breast Cancer:** Women should get mammograms every year or every other year depending on doctor rec. Women >75 may discontinue screening

**Cervical Cancer:** No testing is needed if you've had regular testing with normal Pap smear during the previous 10 years

**Colon Cancer:** Same as age 50-64

**Lung Cancer:** Screening for women with an active or former history of smoking (past 15 years). Low-dose CT scan

Check with your insurance: most screenings are covered on a yearly basis under the Affordable Care Act or Medicare.

# General Disease Prevention with Exercise

## WHAT IS PHYSICAL ACTIVITY?

Exercise can include:

Walking Riding a horse Cleaning

Also: Running, Lifting Weights, Lifting hay bales, Riding a bike, Gardening, Cleaning, Climbing, Sheep herding, Yoga, Dancing

Any many other activities!  
If you're moving, you're doing physical activity.

Normal Feelings During Exercise:

Increase in temperature (sweating) Increased breathing Increased beating of the heart

Also: Muscle Fatigue

Abnormal Feelings During Exercise:

Dizziness, confusion, nausea, loss of control of body movements, chest pain, sharp feelings in the joints or muscles, no change in temperature, Numbness or tingling in the arms and/or legs, unable to catch breath. Call your doctor if you have any of these abnormal feelings.

## BENEFITS OF EXERCISE

- |  |   |
|--|---|
| <p><b>Weight loss</b></p> <p>Increases "good cholesterol", decreases "bad cholesterol"</p> <p>Prevents Disease</p> <p>Decrease in risk of:</p> <ul style="list-style-type: none"> <li>• Cancer (several types)</li> <li>• Depression</li> <li>• Arthritis</li> <li>• Stroke</li> <li>• Heart attack</li> <li>• Falling</li> <li>• Diabetes</li> <li>• Acute illness</li> </ul> | <p><b>Disease Prevention</b></p> <p>Decreases in:</p> <ul style="list-style-type: none"> <li>• Blood pressure</li> <li>• Inflammation (which contribute to heart disease)</li> </ul> <p>Improvements in:</p> <ul style="list-style-type: none"> <li>• bone density</li> <li>• mood</li> <li>• energy levels</li> <li>• sleep quality</li> <li>• memory</li> </ul> |
|--|---|

## BENEFITS OF EXERCISE FOR CANCER

- |   |   |
|---|---|
| <p><b>Reduces:</b></p> <ul style="list-style-type: none"> <li>• risk of colon, breast, lung, prostate, and endometrial cancers</li> <li>• cancer-related fatigue</li> </ul> | <p><b>Maintains:</b></p> <ul style="list-style-type: none"> <li>• healthy bones</li> <li>• muscles</li> <li>• joints</li> </ul> |
|---|---|

Being inactive (watching TV, sitting around) increases risk of death

## COMMON BARRIERS TO EXERCISE

No Transportation No time, Too busy Don't know how to exercise

## CDC EXERCISE RECOMMENDATIONS

**Avoid inactivity!**  
Some activity is better than none; any gives some health benefits.

Do 2 hrs 30 min/wk of moderate-intensity, or 1 hr 15 min/wk of vigorous-intensity aerobic activity

For more health benefits, increase aerobic physical activity to 5 hrs/wk of moderate-intensity, or 2 hrs 30 min/wk of vigorous intensity aerobic physical activity

More exercise gives more health benefits

Moderate-intensity exercise includes:

- Biking < 10 mph
- Brisk walking
- Roofing / Painting
- Hiking
- Gardening
- Dancing

Vigorous-intensity exercise includes:

- Jogging/Running
- Basketball
- Soccer
- Biking > 10mph
- Swimming Laps
- Weight Lifting

Perform aerobic exercise in episodes of at least 10 min & spread it through the week

Do muscle-strengthening activities (such as lifting weights) 2 or more days/wk

## HOW TO OVERCOME THESE BARRIERS

**Bring family with you** to your exercise session.

**Exercise with someone** (relative or friend).

**Exercise is good for you.** Learn the benefits from your trainer.

**Do the home exercises** your trainer gives you each week.

**Make good use of your time.** Do your exercise when talking to friends and family. Get the grand kids to do them with you.

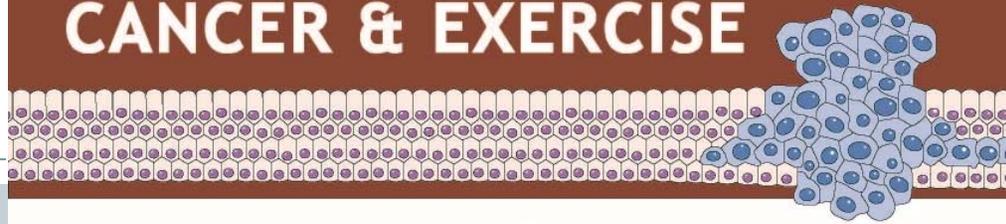

**Walk more. Drive less.**

Get your family and friends to help you exercise.

Make exercise part of your everyday routine.

# CANCER & EXERCISE

## WHAT IS CANCER?

Cancer is **uncontrolled growth** of some cells in the body. Cancer cells invade healthy tissues in the same area or other areas of the body. Cancer cells make it difficult for the body to function as it should.

Ats'íis bitl'óol dah díníisééh áádóó ba'át'e' hólq yileeh, doo bééhózingóó díníisééh. Hats'íis biyi'di lahgo hazhó'ó hats'íis nooséel dóó hasht'e náá'níft yęę t'óó bitahjigóó díníisééh. Bee hats'íis nizhónigo háádoo'níft yęę doo hazhó'ó naalnishda silíí'.

## SHOULD I EXERCISE DURING / AFTER CANCER?

Return to normal activities as soon as possible after surgery

Work on resistance and flexibility exercises

**Avoid Inactivity!!**

# YES!

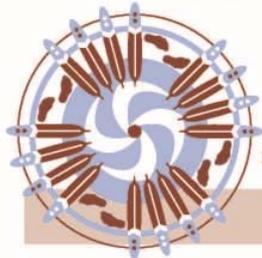

Seek medical advice for individual prescription

Exercise is safe during and after most treatments.

Start slowly & Listen to your body

Exercises maintains function, quality of life, and ↓ fatigue

Tucson (520) 694-2873

## LOCAL RESOURCES

# Cancer Exercise Guidelines

## GENERAL

**EXERCISE IS SAFE**  
both DURING and AFTER  
most types of cancer treatment\*

\*Excluding bone marrow transplants

Allow adequate time to heal  
after surgery (up to 8 weeks)

Consult your doctor before  
exercise if you have:

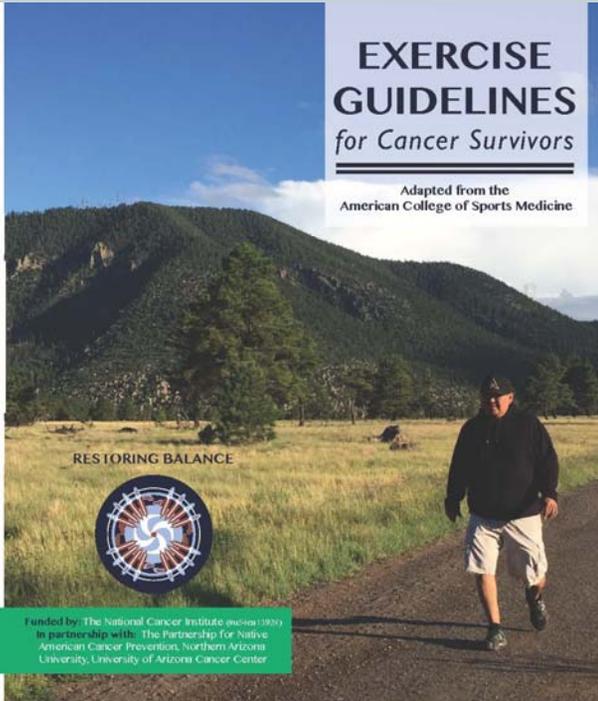

- anemia
- numbness or tingling in your  
hands or feet (neuropathy)
- risk of infection from  
chemotherapy
- feel uncoordinated
- a lack of body control
- a fracture

Fatigue is common; many  
**FEEL BETTER** with exercise.

**Every patient is different!**

Exercise programs may need to be changed  
based on health status, treatments, and  
anticipated disease trajectory.

**TAKE HOME** • Exercise plays a **VITAL**  
**Avoid inactivity** • role in cancer  
**prevention & control**

RESTORING BALANCE

Funded by: The National Cancer Institute (NCI) (100%)  
In partnership with: The Partnership for Native  
American Cancer Prevention, Northern Arizona  
University, University of Arizona Cancer Center

## EXERCISE GUIDELINES for Cancer Survivors

Adapted from the  
American College of Sports Medicine

## GUIDELINES FOR HEALTHY ADULTS

weekly activity of 150 minutes  
of moderate-intensity exercise or  
75 minutes of vigorous-intensity  
exercise or an equivalent combo.

Aerobic

**Moderate-intensity exercise:**

- Biking <10 mph
- Brisk walking
- Roofing
- Hiking
- Gardening
- Dancing

**Vigorous-intensity exercise:**

- Biking >10 mph
- Jogging
- Swimming Laps
- Soccer
- Basketball
- Shoveling

Resistance

two to three weekly sessions;  
exercises for major muscle groups

Flexibility

stretch major muscle groups and  
tendons on days that other  
exercises are performed

Follow these guidelines as closely as you can

## exercise specifics for patients with PROSTATE CANCER

Aerobic,  
Flexibility,  
Resistance

If you have weak bones,  
talk to your doctor about safe  
activities.

## exercise specifics for patients with BREAST CANCER

Aerobic,  
Flexibility

If you have weak bones,  
talk to your doctor about safe  
activities.

Use low weight (1 pound to start)  
at first; increase weight slowly  
over 16 weeks.

Watch for arm/shoulder  
symptoms, including swelling,  
(reduce resistance or stop  
specific exercises).

Back off the level of weight  
by 2 weeks worth for every week  
of no exercise (example: a  
2-week exercise vacation = back  
off to weight used 4 wk ago).

Flexibility

**Special Considerations:**  
Yoga is safe as long as the  
arm and shoulder do not  
bother you.

## exercise specifics for patients with COLON CANCER

Aerobic

If you have an surgically created  
opening in the body (stoma), as  
you doctor before participating  
in contact sports

Resistance

For patients with a surgical  
opening in the body, start with  
low weight at first; increase  
weight slowly to avoid an organ  
from squeezing through the  
muscle wall of the body.

Flexibility

Do not hold your breath with  
stretches.

## exercise specifics for patients with GYNECOLOGIC CANCER

Aerobic

Very overweight women  
(BMI>35) may require an  
altered program.

A stationary bike is better than  
walking or running if you have  
difficulty feeling your feet.

Resistance

As your doctor about resistance  
exercise if you had lymph node  
removal, radiation to lymph nodes  
in the groin, or a lot of swelling.

# Goal Setting Support

## WHAT IS PHYSICAL ACTIVITY?

Exercise can include:

Walking / Riding a horse / Cleaning

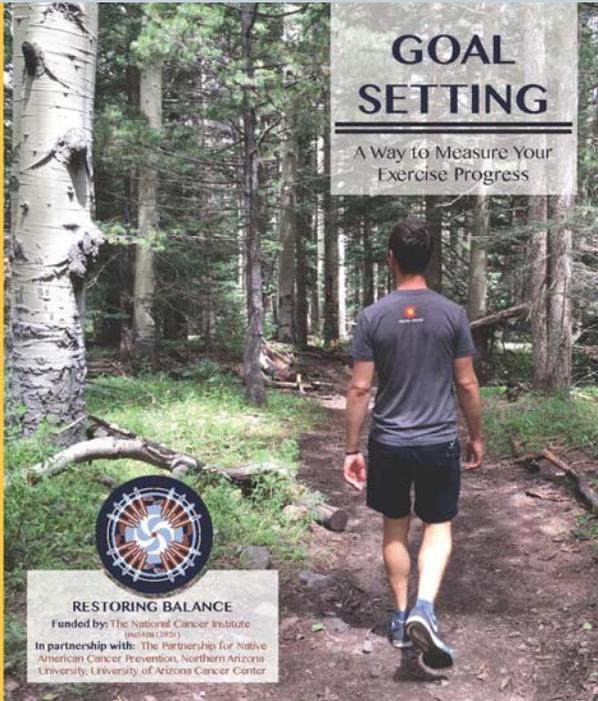

Dancing / Lifting Hay Bales / Yoga

Also: Running, Lifting Weights,  
Riding a bike, Gardening,  
Climbing, Sheep herding

Any many other activities!

If you're moving,  
you're doing physical activity.

## WHAT IS A S. M. A. R. T. GOAL?

SPECIFIC

**What exactly do you want to do?** Don't make goals such as "get in shape." Make unique goals such as: "Walk 30 minutes without stopping for a rest."

MEASURABLE

**How can you tell you've reached your goal?** Try to make goals that you can give numbers to, like walking 1 mile. You'll know definitively when you've achieved your goal.

ATTAINABLE

**Can you be expected to reach your goal?** Start small. Instead of running a marathon, at first aim to run a mile or another reasonable goal you think you can achieve.

RELEVANT

**Is your goal going to get you what you want?** If your goal is to lose weight, relevant goals include eating a healthy foods and exercising regularly.

TIME-BOUND

**When do you think you can accomplish your goal?** Having a timeline can help you realize progress, as well as giving you a deadline for reassessment!

## WHAT DOES A S.M.A.R.T. GOAL LOOK LIKE FOR EXERCISE?

The sky's the limit for what you'd like to do.

EXAMPLES:

"In 1 month, I will ride my bike for 10 miles twice a week."

"Next week, I will go on 3 walks with my friend group for 20 min."

"In 6 months, I will be able to herd sheep for a full day with two 30 minute breaks."

# Community Relations & Capacity Building

- Training and financial support of Native students in cancer prevention research
- Training non-Native students, faculty, staff in working with Native populations
- Chapter & Western Agency Council
- Navajo Epidemiology Department
- NNHRRB
- NACA
  - Contract
  - Training to expand local, sustainable expertise
- Arizona Oncology Associates

# Funding Sources

- **NIH/NCI: U54CA143924**
- **NIH/NCI: P30CA023074**
- **University of Arizona Faculty Seed Grant**
- **Undergraduate Biology Research Program HHMI 52006942**
- **Northern Arizona University BRIDGES to Baccalaureate NIGMS1R25GM102788-01**
- **UA Medical Student Research Training Grant (NIH #T35HL007479)**

# Extra slides

# Timelines and Planning

- **Determine which entities must approve your research, when they meet, and what forms and processes they require**
- **Stay up to date on tribal requirements**
  - Example: Navajo Western Agency council requirement was added 2016
    - ✦ WAC Meetings are quarterly (in rotating locations)
    - ✦ Understand process to get on agenda; need a sponsor at the meeting
- **Determine order of approval:**
  - For Navajo, gain university IRB and local entities approval first
  - Other tribes may differ
- **Complete tribal IRB forms/paperwork in addition to university forms and submit to appropriate IRB**
  - Check submission dates, meeting dates, submission format (ie. hard copy)
  - Travel to IRB meetings for project approval, amendments, annual reports, closure, manuscripts, presentations
  - Plan for revisions and resubmission to both university and tribal IRBs

# DG Part I: defining cancer

- *How would you define cancer?*
- *How did you learn about cancer?*
- *Do you think cancer is a problem for people of Navajo background? Do you think this has changed over the past years? If yes, why do you think this is?*

## **DG Part II: knowledge of causes, contributors to cancer and prevention and treatment**

- *What do you think are the main causes of cancer?*
- *How did you find out about these causes?*
- *What do you think is the most important cause or contributor to cancer? If you were to rank all the factors you mentioned, what would be the most important and least important in your opinion?*
- *Are there any other contributors to cancer?*

## Part II: knowledge of causes, contributors to cancer and prevention and treatment

- *Do you think cancer can be prevented? If so, how?*
- *Do you think lifestyle choices such as diet and physical activity impact getting cancer?*
- *Do you think cancer can be treated well?*
- *What do you think are important factors in cancer coming back after treatment?*
- *Do you think physical activity and other lifestyle factors impact cancer coming back?*

Rigor Category	NACP Pilot Study Phase II
Scientific Premise	<ul style="list-style-type: none"> <li>-Cancer 1<sup>st</sup> or 2<sup>nd</sup> cause of death among Native Americans 45-64<sup>1</sup></li> <li>-Disparities in survival rates<sup>1,2</sup></li> <li>-Most common Navajo cancers positively affected by PA in other populations</li> <li>-No PA interventions among Navajo cancer survivors to date</li> <li>-Feasibility study needed to formulate rigorous full study</li> </ul>
Scientific Rigor (design)	<ul style="list-style-type: none"> <li>-Randomized controlled trial w/ repeated measures</li> <li>-National cancer exercise guidelines, adapted for cultural factors based on rigorous qualitative study</li> <li>-standardized, bilingual intervention delivery and data collection (feasibility, QOL, PA, biomarkers)</li> <li>-community capacity building to enhance sustainability, recruitment, retention</li> <li>-objective measure of PA, metabolic changes, body habitus</li> <li>-gold standard QOL survey (PROMIS)</li> </ul>
Biological Variables	<ul style="list-style-type: none"> <li>-Sex, age, wt, &amp; underlying health conditions captured in survey and accounted for in analyses</li> <li>-limited to Navajo background</li> <li>-Tx &amp; cancer stage by survey, no medical record review; limited power.</li> </ul>
Authentication	<ul style="list-style-type: none"> <li>-biomarkers measured B, 6, 12, 18wks; periodicity aligned with detection limits of PA related physiological changes</li> <li>-HbA1c valid and reliable marker of change in metabolic function; portability key so not venipuncture</li> <li>-anthropometric measures valid and reliable markers of change in body habitus; gold standard imaging not feasible</li> </ul>

## 2010 ACSM & 2012 ACS

- **Cancer-specific resistance training: Recommendations do not need to be modified for prostate, colon, and hematologic cancers**
  - Breast: start with a supervised program of at least 16 sessions at a very low resistance; progress resistance at small increments
  - Prostate: add pelvic floor exercises for those who undergo radical prostatectomy
  - Colon: for patients with a stoma, start with low resistance and progress slowly to avoid herniation at the stoma
  - For bone marrow transplant patients, resistance training may be more beneficial than aerobic activity

# Cancer-Specific Safety Precautions

- **ACSM report identified safety cautions for survivors at risk for lymphedema and skeletal muscle fractures or infections**
  - Arm and shoulder problems secondary to breast cancer treatment, ostomy after colon cancer, or swelling/inflammation in the abdomen, groin, or lower extremity following gynecologic cancer
- **Risks of participating in physical activity must be balanced against the risks of inactivity**
  - PA reduces the incidence and severity of lymphedema

# Intervention Mapping

Intervention	Behavioral Objectives	Intervention Activities	Implementation Strategies	Evaluation Strategies
<b>PEN-3 and HBM</b>	<b>Perceptions</b>	<ul style="list-style-type: none"> <li>• Reinforce accurate beliefs about cancer causes, environmental and behavioral factors.</li> <li>• Reduce inaccurate beliefs about cancer.</li> <li>• Improve understanding of quantity and intensity of physical activity during and after cancer treatment.</li> </ul>	<ul style="list-style-type: none"> <li>• Provide education about cancer in Navajo and English.</li> <li>• Challenge fatalism and stoicism towards treatment and health post-diagnosis.</li> <li>• Promote ethnic pride and alignment of health and balance with cultural beliefs.</li> <li>• Skill building/health coaching to increase perceived control over health.</li> </ul>	<ul style="list-style-type: none"> <li>• Personalize the education depending on individuals' beliefs and level of knowledge.</li> </ul>

Frame work	Theor. Construct	Intervention Objectives	Strategies for weekly group sessions	Strategies for individual activities
PEN-3 and HBM	<b>Enablers (PEN-3)/ Perceived Barriers (HBM)</b>	<ul style="list-style-type: none"> <li>• Decrease structural barriers to seeking treatment where possible (financial, logistic, cultural).</li> <li>• Decrease fear about screening and finding out test results.</li> <li>• Promote knowledge regarding the US healthcare system, what services are available and where to access services.</li> <li>• Reinforce trust of community health representatives.</li> <li>• Improve skills to promote communication with healthcare providers and family members about cancer.</li> </ul>	<ul style="list-style-type: none"> <li>• Discuss healthy changes that are possible within structural limitations.</li> <li>• Disseminate information about screening recommendations, where to seek treatment and services for translation and patient navigation.</li> <li>• Challenge negative beliefs about screening and learning about results.</li> <li>• Practice communication with medical providers (role-playing).</li> <li>• Practice goal setting and self-monitoring as effective techniques for improving diet and physical activity.</li> <li>• Highlight culminating event to facilitate behavioral strategies of (goal-setting/self-monitoring).</li> </ul>	<ul style="list-style-type: none"> <li>• Review individual structural barriers and ways to address them.</li> <li>• Engage in personalized goal-setting based on individuals' activity level.</li> <li>• Review home-based program activities based on activity monitors.</li> <li>• Practice communication with health provider one-on-one for issues participants are not comfortable discussing in group setting.</li> <li>• Reinforce progress towards individual goals and ability to self-monitor.</li> </ul>
